Wherever you are

The Self Build Challenge

When Ross Fanning began building his two storey, four-bedroomed family home in Co. Wexford several years ago, before work commenced, he researched all available energy options.

Ross grew up with natural gas from the North Sea in his family home in Glasgow and always liked its clean efficiency and versatility. As his new home in Wexford was not on the natural gas grid, he opted for Flogas LPG. He was also installing solar panels but as they only provide about 50% of the hot water requirements for an average Irish home, LPG is the ideal complementary fuel.

The Flogas Solution

Mark Murphy, an independent RGII-registered and Flogas approved LPG installer, surveyed the site. His competitive quote, excellent track record and the special offer of 1,200 litres of Flogas LPG free of charge sealed the deal.

David Conroy, the local area representative for Flogas said,

“The installer was involved from the building stage which is the ideal way to do it. It means you can tie-in the concrete foundation for the tank and pipe laying with the construction and the overall layout of the house. Ross wanted LPG for central heating, hot water, cooking, gas fire, tumble dryer and barbeque in the garden and that was all achieved.”

Ross and his family moved into their new home on schedule and he said,

“The radiators heat up very quickly and within 30 minutes you have enough hot water for the kids’ baths and showers. I was very pleased with all the work and we’re enjoying our cosy home.”

Step by Step

1. Gas layout agreed, and pipes laid
2. Concrete foundation for tank is discussed
3. Tank and boiler delivered and installed
4. Tank filled and made ready for commission

Seamless Changeover Process for New Builds

For new builds looking to use LPG for their energy needs the gas layout is agreed and the concrete foundation and pipes are laid. A RGII registered gas installer will then install the recommended boiler for your home. Flogas arranges for the tank to be filled and the system is ready for commissioning.

Enquire now for a free home visit where our sales representatives will outline the benefits and savings you will enjoy by converting to Flogas LPG.

Results

- 1. Clean-burning,**
economical fuel
- 2. Hot water**
on demand
- 3. Practical sized boiler** stored in utility room
- 4. 1,200 litres**
of free gas
- 5. LPG runs complementary**
to solar power systems
